SKILLS

CORE STACK

PHP · Laravel · Vue 3 + Inertia
TypeScript · MySQL

Also build with

Next.js / React, Flutter (Dart),
CodeIgniter 4, Python (Django,
FastAPI), Tailwind CSS

Cloud & DevOps

GitHub Actions CI, Docker, Linux
servers, cPanel / WHM, Cloudflare,
Vercel, Fly.io

Data & realtime

PostgreSQL (Row-Level Security),
Redis, MongoDB, Firebase,
WebSockets (Reverb), Web Push

AI & integrations

Claude & OpenAI APIs, Azure OpenAI,
Stripe Connect, Paystack, WhatsApp
Cloud API, Microsoft Graph

Engineering practice

SRS-driven delivery, multi-tenant
architecture, automated testing
(PHPUnit, Pest), backups & disaster
recovery

Security

Application hardening, incident
response, digital forensics (DFIR)

EDUCATION

2025 – PRESENT

B.Eng. Electrical Engineering

Air Force Institute of Technology
(AFIT), Kaduna

AUG 2021 – NOV 2024

B.Sc. Computer Science &
Software Engineering

Global Wealth University, Togo

2022 – 2023

Backend Web Development

SACS Computers — Certificate (PHP &
Laravel)

LANGUAGES

English Fluent
Igala Native
Yoruba Conversational

Ojoh Peters Ojochegbe

Senior Software & Cloud Solutions Engineer

Multi-tenant SaaS · Cloud deployment & operations · AI integration · Security

PROFILE

Senior engineer who takes B2B products from specification to production — and keeps them running. I lead engineering on Efiko Management Consulting's product portfolio, mostly as sole developer, with 5+ years building multi-tenant SaaS and AI-integrated platforms across web, mobile, CI/CD, hosting and security.

EXPERIENCE

Senior Software & Cloud Solutions Engineer

Aug 2026 – Present

Efiko Management Consulting · Nigeria & USA · Lead engineer on the product portfolio

- Shipped **8 B2B products** from client SRS to production, most as sole developer — including TrainerPro's full **16-module specification** and SalesPro with **115 automated tests**.
- Built **Efiko Daily** end-to-end: web platform with realtime WebSockets, Web Push and Paystack subscriptions, plus a **native Flutter app** for iOS and Android on a dedicated mobile API.
- Lead developer on the **Efiko HRIS** suite (CodeIgniter 4) — performance, L&D, payroll/PAYE, succession and 10+ other modules; built the EfikoHub app launcher.
- Own production operations:** deployments behind Cloudflare, GitHub Actions CI with static analysis across the product line, push infrastructure, and encrypted off-server backups with a documented recovery plan.
- Hardened platforms and led incident response:** per-tenant access control, signed webhooks, MFA/passkeys and tamper-evident audit logs.
- Delivered **AI features on the Claude API** with human review built in: feedback-theme synthesis and daily headline drafting.

Efiko Daily

Team accountability SaaS + Flutter app: rollover engine, live stand-ups, reports, subscriptions.

SalesPro

Multi-tenant pipeline: 8-level hierarchies, Kanban, forecasting, mandatory next action · 115 tests.

TrainerPro

Trainer practice management: QR attendance, Zoom/Teams import, certificates, Kirkpatrick L3.

FeedbackPro

Anonymous workshop feedback with scoring, branded reports and Claude-powered synthesis.

CoachPro

Coaching practice platform: engagements, sessions, goals, invoicing, client portal, passkeys.

RiskPro · WorkFlow Pro

Operational-risk RCSA with KRI API and audit trail; no-code approval workflows with SLAs.

Software Developer · Efiko Management Consulting (Contract)

Dec 2025 – Jul 2026

- Built and maintained Efiko's **Nigeria and USA corporate websites** (CodeIgniter 4, MySQL) — CMS, blog, podcast, masterclasses and a recruitment / talent-pool portal.
- Took over as **lead developer on the Efiko HRIS** codebase and started the Pro suite — SalesPro, CoachPro, RiskPro and WorkFlow Pro.

Freelance Full-Stack Engineer · Independent

2022 – Present

- Rebuilders Path Systems (US)** — Laravel 13 public site and staff platform: MFA, CRM, deadline engine and workflows; documents in SharePoint via Microsoft Graph, an Azure OpenAI document assistant and Stripe billing.
- Housing for Humanity International** — 40+ page NGO website on Next.js 16, delivered to the client's architecture with documented handover.
- Auctor Stack** — agent-native AI backend: FastAPI, Postgres Row-Level Security, BYOK model gateway, grounded retrieval, SDKs, CLI and MCP server on Fly.io.
- FlexBill** — WhatsApp-first B2B billing on Next.js 16 and Prisma with Stripe Connect direct charges and signed-webhook verification.
- EcoCoin** (2024 – 2025) — Solana SPL token with airdrop, gamification and Phantom wallet.

SELECTED EARLIER PROJECTS

Public Records NG — hub for Nigeria's public records (Laravel + React).

The Green Seal — executive activity tracking for IHS-BiRD&L.

Crowdsource Emergency — real-time emergency reporting (Next.js + Laravel).

NDNB — verified national biographies with editorial workflow.

ServiceMan — three-sided service marketplace with Paystack.

BlogScribe — AI writer auto-publishing to WordPress (Django + OpenAI).
